

Justification for my wabsite

Hi am Bethlehem Getachew

My wabsite have three programing language HTML , CSS and Javascript. As you all know HTML a standardized system for tagging text files to achieve font, colour, graphic, and hyperlink effects on World Wide Web pages. CSS stands for Cascading Style Sheets. CSS describes how HTML elements are to be displayed on screen, paper, or in other media. JavaScript is a text-based programming language that allows you to create interactive elements on your web page.

I use kinds of HTML tags like <div> <script> <link> and so on. CSS I use very good things like border radius, bakeground color and etc. Javascript i use for minimaization for the wabsite and olso to link the wabsite with a server.

My wabsite have like home page, about page , service page , blog page and contact me page. Each page are linked so if you want to got some page you can go to the manu bar and click the name of the page that you want to visit and the link will move you ware you want to see or vist.

On the about page there are skill, education, experience all of them are functional. On the blog page there are questions on the pictures so the person who sees them can guess or even answer them in the contact me section.

And finally any one who have any comments or suggetions and even wants to contact me can use the contact section and i will reply to every single of them with love.

My server is google sheet and it is linked by javaScript. it was so easy to conect it so if you want to learn contact me. Ther are many thing that will be update so stay tund.

Have a good day
